

## **Platelet Rich Plasma Therapy**

Platelet rich plasma is a simple, natural, and extremely effective therapy that has been used over a decade. This therapy is used in the treatment of individuals affected with injured and torn ligaments, tendons as well as knee pain due to torn meniscus or arthritis. A number of sports stars have received this treatment because of its effectiveness and faster healing of soft tissue injuries feature. Besides that Pittsburgh Steeler star Hines Ward has also joined [PRP Therapy Centers](#) to recover from a nagging knee injury.

Mostly all medical community has adopted this therapy because of its popularity. With this therapy you can get rid of your pain in the short-term. In this procedure, a patient's own blood uses. This procedure involves drawing a blood from the patient's body and the platelets are separated in a centrifuge. After completion of the blood compound separation process, the patient's own plasma with a high concentration of platelets is injected into the injured area. Your blood is processed using a proprietary method. The platelet rich Plasma Injection mostly are used in the condition such as arthritis, plantar fasciitis, tennis elbow, knee problems, and the strengthen the damaged tendons.

In a nutshell, Platelet Rich Plasma Injection is one's own platelets which have characteristics in this way that it encourages the natural healing process. The high concentrations are used in the healing process and show their results very fast.

The chances of rejection of this therapy are very low. This is the major advantage of this therapy because the platelets are used in this process belong to the patients that is being treated. In this therapy, a direct injection is used to carry the concentrated platelets to the points they are most beneficial which other therapy can't do.

In the research, it is found that the healing power of this process is very high even with injuries such as tendons and tennis elbow which are notoriously hard to heal. In PRP treatments it is found that there is no side-effect because it uses patient's own blood. This new method for administering PRP Treatment is fully approved by the FDA.
